

STARTED AS A DREAM

...and a passion for automobiles led us on this exciting journey. In the beginning, we had a vision for what an air filter should be, and what you see today is the result of that vision. From the filter media to the urethane frames to the seal design, no stone was left unturned. Our attention to detail is evident in our filters, and in every product we design and produce. Now in our 23rd year, that same approach is carried through all our product lines. Our cold air intake and exhaust systems and other product lines are second to none, all built in our 160,000+ sq. ft. facility in Corona, California, and we continue to grow in 2022 with an additional facility. Exciting and recent acquisitions have expanded our portfolio into the suspension and tuning markets, allowing us to provide even more solutions and high-quality products for true automotive enthusiasts. Our growth and continued success would not be possible without the right team of people. We share the same dream, vision, and passion for performance. This united front is what allows us to create such exciting and compelling products. From our design and engineering teams who create the products, to the manufacturing staff who build them, to all our support staff who manage the purchasing, sales, marketing, customer service, and accounting — everyone plays a key role in the success of aFe.

Thank you to our customers for your continued support of aFe and for celebrating with us in our 23rd year in the automotive after-market. This, our 23rd year catalog, shows how far we've come and includes our full product line for you to see. This is what we do.

A FOUNDATION OF RESEARCH & DEVELOPMENT

We are in the business of creating the most exciting, highly engineered products in the world.

Our products excel in every way — the installation, the fit, and the performance are benchmarks in the automotive after-market industry.

When you bolt on an aFe POWER product, you get more than just performance — you get perfection. With full-time teams of engineers dedicated to specific product groups, our products are designed to fit a specific vehicle year, make, and model range. Our extensive research and development programs put products to the test on our in-house dyno as well as on the street, the track, and off-road, to ensure performance improvements over stock.

Versatility at The Heart of Airflow

Our filters are the heart and soul of our industry-leading cold air intake systems, and in 1999, we set out to provide the ultimate air filter for OE replacement, racing, off-road, and universal applications. Not only did we focus on creating the best filter on the market, but we also made it work for any application. From the track to the trail to the work horse and back again, aFe meets the high demands we place on our vehicles.

We wouldn't do it if it didn't make POWER.

Test results on aFe's Dynojet dyno showed power gains across the power band, topping out at +17 HP and +15 lb-ft torque at 6,000 rpm. Testing was conducted on a 2020 Mustang 5.0 comparing stock and the aFe Power BTB (all tests conducted using 91-octane fuel). No other modifications to the vehicle were made, so imagine the potential when you add in other performance enhancing products such as a cold air intake, tuner and cat-back exhaust! By the way, for you truck enthusiasts, this product also fits the F-Series (see website for exact vehicle fitment).

The Heart of the Body.

To address any performance concerns such as rough idling or check engine lights (CEL's), aFe chose to use OEM electronics and gearing mechanism to ensure proper function and connectivity. Again, the 85mm throttle body does not require any custom tuning: it works well right out of the box.

85MM BILLET THROTTLE BODY

How did we do it? Not only did we increase the bore diameter from the stock 80 mm to 85 mm, we redesigned the throttle body from the ground up, aerodynamically improving the air flow path.

111121083

aFe POWER Carbon Cabin Air Filters reduce impurities such as dust, soot, and pollen from entering your cars's ventialtion system. Activated carbon granules remove odors and fumes so you and your passengers breateh cleaner, fresher air. (see web site for part numbers and vehicle applications).

CARBON CABIN AIR FILTERS

HORSEPOWER THAT RUMBLES AMERICAN MUSCLE

American muscle is American pride. With our performance electronics, induction, exhaust, and tuned suspension products, we offer more power and control for your late-model muscle car, all proudly developed and tested in the U.S.A.

It's not just a pickup.

For work or play, your truck is your life. Whether it's a weekend trip off-roading, hauling, towing on the job, or driving your daily commute, we offer all the performance upgrades for your truck lifestyle.

GO ANYWHERE JEEP-WE DO IT

Off-roading is more than just a

hobby — it's a way of life. That's why we develop parts for everything from daily drivers to those made for the most extreme off-road adventures.

23 YEARS LATER, NOW ON OUR THIRD EXPANSION

1375 SAMPSON AVENUE

aFe POWER's 23rd anniversary is highlighted

by recently acquiring a new 127,000 square foot building, only a short distance away from our Corona, CA facility. Our taste for pushing the limits kept us going- it's what innovation is all about.

Throughout the years, we've overcome obstacles, from the risks of starting a new business to the 2008 recession. Despite the pandemic and recent years that challenged us all, we persevered with optimism, teamwork, and strategy. Even with all these challenges, we have continued to grow, exceeding the capacity of our existing buildings. Acquiring this greater building enables our operations to match our growth, with the cumulation of our facilities now covering over 300,000 square feet.
